

A mixture of the best performing Catch Crop Brassicas.

A mixture of the best performing Catch Crop Brassicas.

Sow from April to mid-August for palatable forage from June through to early February.

- Rapid establishment
- Very high yields of palatable forage
- Excellent disease and bolting resistant varieties for a longer grazing period and best grazing quality
- Good winter hardiness

Care should be taken when changing an animal's diet from grass to high protein brassicas (especially in Summer). If you are unfamiliar with the utilisation of these crops, we would ask you to read our guidelines on the subject and these are available on request.
