

Caledonian

High yielding marrow stem type with club root tolerance

End Use: Dairy & Beef

Utilisation: Graze in situ & Zero Graze

Sowing period: Spring

Utilisation Period: Autumn & Winter

Caledonian is the highest yielding kale in our trials. It is clubroot tolerant, which now enables growers to continually sow kale on clubroot infected sites.

Caledonian's huge yield makes it ideal for utilisation by dairy and beef cattle.

Bred by [James Hutton Institute](#).

Strengths

- Very high yields
- Club root tolerant
- UK proven
- Good digestibility
