

For added grazing interest and nutrition

Where there is a desire for a wider nutritional profile from herbage, it makes sense to extract these nutrients from a broader range of plants so we have formulated this mixtue to cater for this

- Provides a diverse nutritional base to enhance palatability and grazing interest
- Herbs for increased mineral uptake and balanced diet

Sowing Rate 13 to 16 kg/acre

Pack Size 20kg

Ratings

Grazing Tolerance

Ryegrass Ley

PROS	CONS
Productive and nutritious	Demanding of nitrogen and moisture
Fast establishment. Vigorous growth	Relatively shallow rooting
Responsive to nitrogen fertiliser	Not as stress tolerant as some species
High yielding in first two years	Lower trace element/mineral profile than some other grasses
	Susceptible to Frit Fly attack

Multi-Species Sward

PROS	CONS
Enhanced stress tolerance. Persistent	Slower to establish
Greater root mass and depth	Lower yield potential and quality
Earlier spring/later autumn growth	Not as responsive to fertiliser
Good trace element/mineral profile	Difficult to control weeds chemically
Can have anthelmintic properties
