

# PROTECTOR

Oliver Seeds

## The profitable provider for Biomass and Forage

- Vigorous initial development
- Suitable for late sowing
- Excellent winter hardiness
- Growing even at low temperature levels
- High tillering
- Early harvest
- Provides highest yields in total dry matter

## Ratings

### Yield

### Disease Resistance

### Winter Hardiness

### Early Spring Growth

### Ground Cover

### Grazing Tolerance

PROTECTOR is the fastest growing rye variety available, it even grows at low temperatures when other varieties stop growing.

Good protection against soil erosion because of soil coverage and rapid plant development in autumn.

The constantly high acquisition of nitrogen allows slurry applications in the autumn. Fertiliser can be used in early spring but should be kept at a moderate level.

Dry matter yield of PROTECTOR is higher than that of other similar varieties (and is similar to hybrid rye) at time of cutting in early May.

PROTECTOR is a perfect pre-crop for silage maize.

This makes PROTECTOR a commercially valuable choice.

PROTECTOR is an excellent supplier of biomass due to its good time:output ratio.

Harvest tip: Wilt PROTECTOR to a dry matter content of more than 18 % to prevent unwanted effluent.
