

RAPTOR

Oliver Seeds

Oliver's best selling catch crop options combined into one mixture.

Oliver's best selling catch crop options combined into one mixture.

Blended to produce a flexible Summer or Autumn grazing mix which can be grazed 2-3 times.

Designed around impressive re-growth character of Winfred Rape

- Produces a more balanced ration for grazing stock
- Tornado provides more reliable re-growth than Winfred alone, even after hard grazing

Rap-tor should be well grazed after 8-10 weeks to optimise the mixture's ability to re-grow.

Care should be taken when changing an animal's diet from grass to high protein brassicas (especially in Summer). If you are unfamiliar with the utilisation of these crops, we would ask you to read our guidelines on the subject and these are available on request.
